Passport No: EG0115452

Conclusion:

Having multiple psychological problems due to overuse of the brain and various causes of psychological pressure and stress. Symptoms of bipolar disorder have been recorded since childhood. Due to a lack of medication during childhood and the current state of mental health, currently are facing attention-deficit / hyperactivity disorder (ADHD). Focusing on something can be the default during the attention deficit period. On the other hand, hyperfocusing (brainstorming) is often part of his personal work-related behavior. Lack of empathy and emotion are also shown. Attention to details and situational control taking ability are present, which represent his self-awareness of his own psychological situation.

Dr. Dana A. Cavallo

Date: 3rd September, 2022
